

Foreign Giving Analysis Report

Beverley Appiatse

09/03/26

Executive Summary

This report will analyze foreign funding to U.S. academic institutions and will focus on UVA's position in that market. Overall, UVA received \$22,189,238 in foreign funding and ranked number 101 out of 318 institutions. The foreign funding UVA received is above the overall median and is also below the market mean. UVA ranked 11th out of 23 institutions in the regional comparison. Several countries including Qatar, China, Saudi Arabia, Canada, Hong Kong, and India were found among the top foreign funding countries in the overall market. These countries were not represented in UVA's foreign funding dataset, however, relationships with these countries could provide an opportunity for UVA to expand its foreign funding.

Summary of Initial Analysis

Country Findings:

The dataset contains three different gift types. They are contracts, monetary gifts, and real estate. Contracts were the most common with 17,274 records. It is then followed by monetary gifts with 10,936 records and real estate with 11 records. Overall, Qatar contributed the most foreign funding with \$2,706,240,869. England initiated the most gifts by count with 3,655. Bermuda had the highest average gift amount which was approximately \$7.69 million. The largest flow from a single country to a single institution was from Qatar to Cornell University at around \$1.018 billion. The top giftors were the Qatar Foundation, Qatar Foundation/Qatar National Res, Qatar Foundation for Education, Anonymous donors, and Saudi Arabian Cultural Mission. The Qatar foundation gifted the most, which was \$1,166,503,744.

Institution findings:

Figure 1. Top 20 Institutions by total Foreign Gift Amount

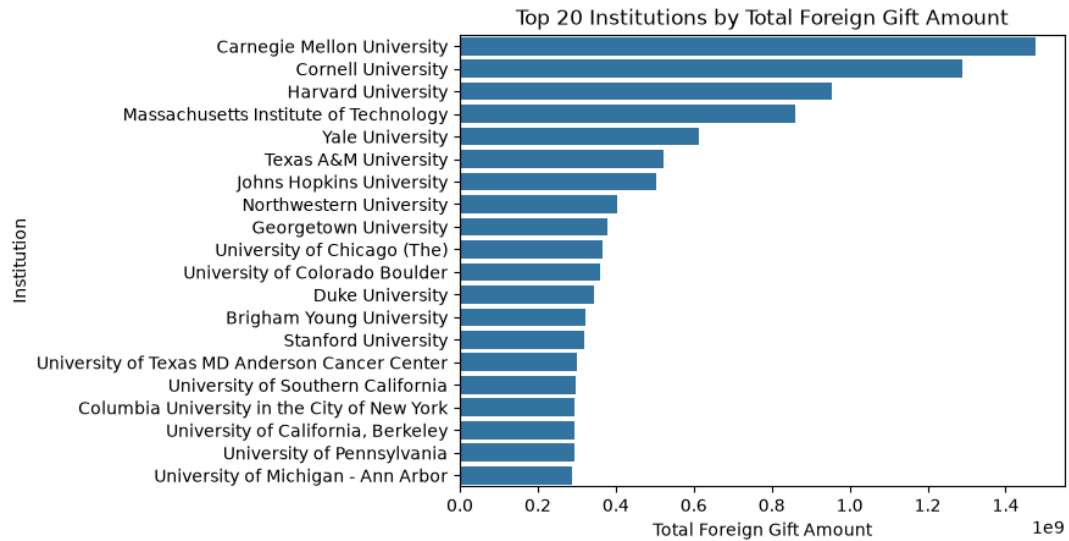

Figure 2. Distribution of Total Foreign Gifts by University

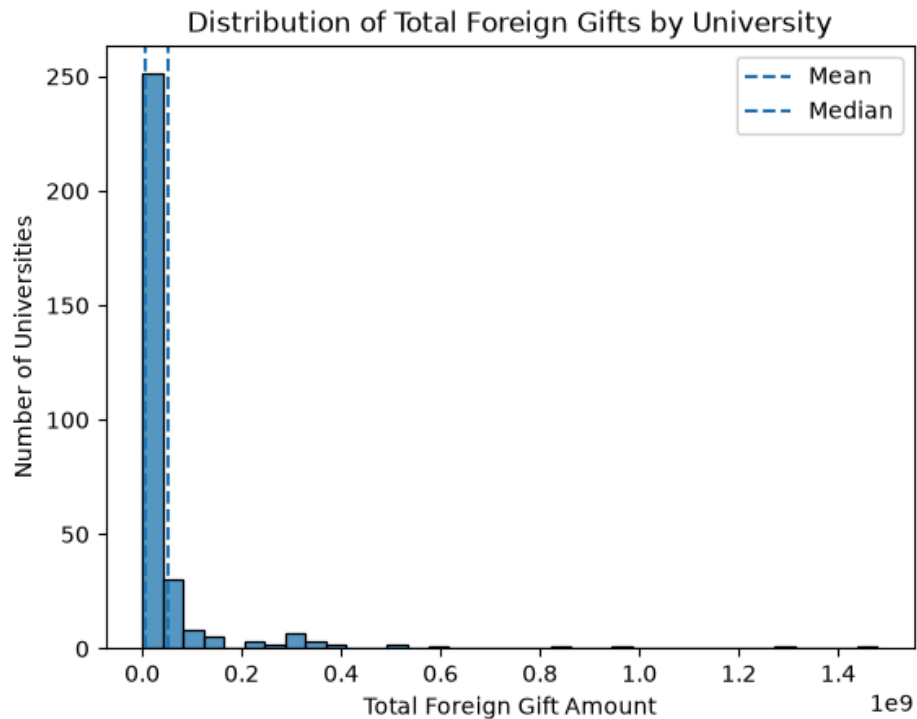

Figure 1 shows the institutions that received the largest amount of foreign funding. Overall, Carnegie Mellon University received the most foreign funding with \$1,477,922,504. The University of California, Los Angeles received the greatest number of gifts per count with 3,916. The average amount of foreign funding each university received is \$52,202,878.97, with a median of \$6,486,791.5. Figure 2 shows the distribution of total foreign gifts received by universities. The mean being drastically higher than the median shows that a small number of universities received larger gift amounts, which pulled the average up and created a right skew in the distribution.

UVA Findings:

UVA received \$22,189,238 in total foreign funding, and it was across 98 records. Bangladesh contributed the largest total amount to UVA with \$4,228,589. It is followed by Sweden with \$4,007,552 and Tanzania with \$2,776,447. England has the greatest number of foreign gifts to UVA with 31 gifts. Switzerland had the highest average gift amount to UVA at \$1,000,000. UVA received 64 contracts totaling at \$1,4807,636 and 34 monetary gifts totaling at \$7,381,602.

Strategy for expanding UVA's foreign funding

UVA has an opportunity to expand its foreign funding by targeting and building relationships with organizations and potential donors from countries that contribute large amounts to U.S. academic institutions but are not currently represented in UVA's foreign funding. As seen in Figure 3, Qatar, China, Saudi Arabia, Canada, Hong Kong, and India are among the top foreign funding countries in the overall market that are not a part of UVA's current sources. Qatar would be the largest opportunity based on the dataset. It contributes \$2,706,240,869 across many U.S. institutions.

Additionally, UVA currently ranks 101 out of 318 institutions in total foreign funding. Figure 4 compares UVA's total foreign funding against other institutions in the region. The total foreign funding UVA received (\$22,189,238) is above the overall median of \$6,486,791.5. However, it is also below the market mean of \$52,202,878. UVA also ranks 11th out of 23 institutions in the regional comparison. These comparisons show that there is room for UVA to increase its foreign funding compared to the institutions in the region and across the nation. If

UVA were to expand into the foreign funding sources where it has no support, then the university could increase its foreign funding.

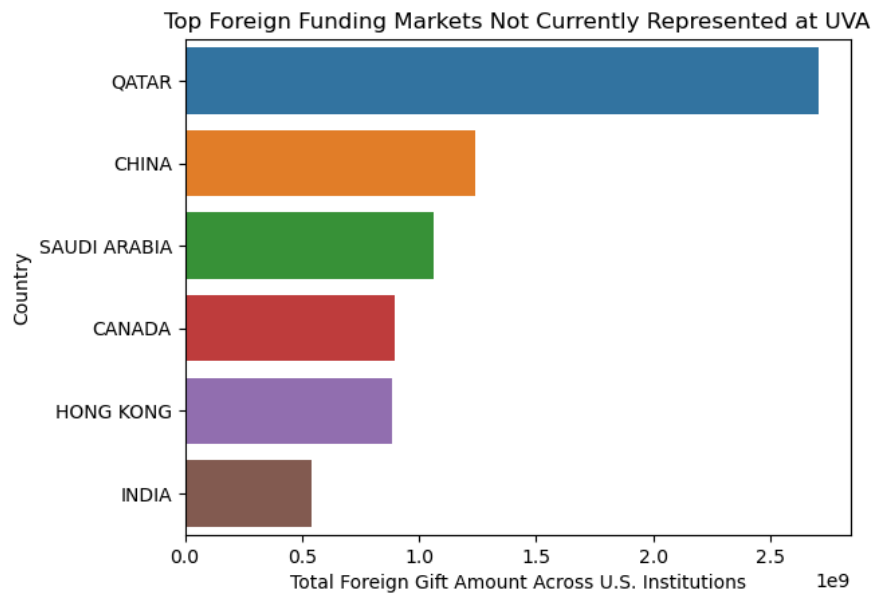

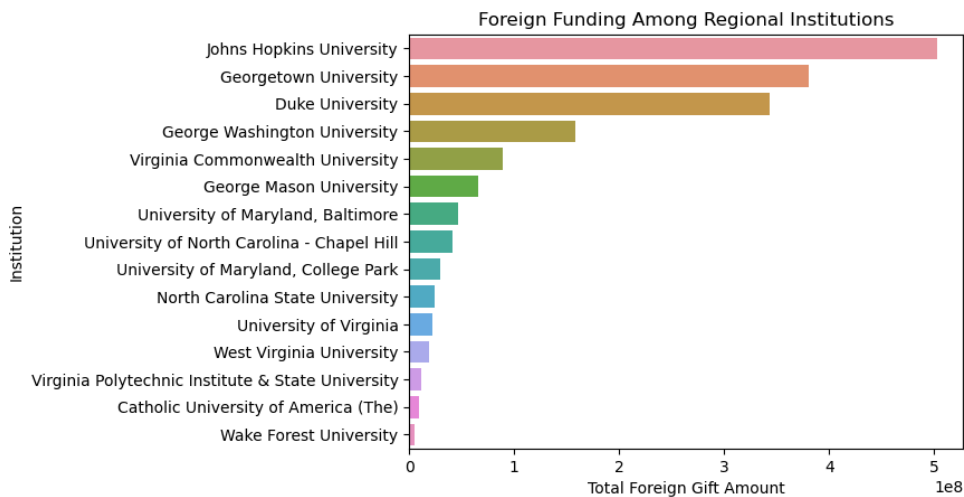

Figure 4. Foreign Funding Among Regional Institutions

Summary of UVA's Prospects

UVA currently ranks 101 out of 318 institutions nationally, and 11th out of 23 institutions regionally. UVA has potential to increase its foreign funding and rankings by expanding its relationships with organizations and donors in countries like Qatar, China, Saudi Arabia, Canada, Hong Kong, and India. By doing this, UVA can also become more competitive against other institutions both nationally and regionally especially since these countries have large foreign funding markets that are not currently represented at UVA.
